

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Gymnasio lawrencei exsul and *Agelaius subniger* from the Isle of Pines. *Reguloides pulcher vegetus* is described as new from western Szechwan, central China¹ while the Green Heron of the Maldives² is named *Butorides albidulus*.— W. S.

Zimmer's "Birds of the Thomas County Forest Reserve."³— The region covered by this paper comprises the U. S. Government Forest Reserve in Thomas County, Nebraska, to which Mr. Zimmer and other Nebraska ornithologists have given much attention. There is presented first an ecological classification of the several 'habitats', the sandhills being regarded as Upper Sonoran while the Prairie is Carolinian. The birds characteristic of each region are mentioned, followed by a fully annotated list of 142 species. While the nomenclature follows the A. O. U. List in the main we note that the possessive 's' of all personal names is dropped as is the trinomial from the 'typical' race except where another form of the same species occurs in the area under consideration, — the latter a rather inconsistent practice. This however in no way detracts from the value of the paper which is a well conceived and well presented contribution to the ornithology of an interesting region.— W. S.

California Economic Ornithology.— In Game Bulletin No. 1 (1913) of the California Fish and Game Commissioners, is reprinted Mr. H. C. Bryant's paper on "The present and future status of the California Valley Quail." The bulletin also contains Mr. Bryant's report on his "Investigation of the Economic Status of Non-Game Birds." This article describes the purposes and methods of the investigation, and briefly reports on the economic status of the Western Meadowlark, Blackbirds, and the Lewis's Woodpecker.

Mr. Bryant's final report on "The Economic Value of the Western Meadowlark in California" appears as Bulletin 236 of the State Agricultural Experiment Station. The percentages of animal and vegetable food for the year are reported as approximately 60 and 40. The writer concludes that the balance is certainly in favor of the Meadowlark.— W. L. M.

Four Economic Papers by Professor W. E. Collinge.— The Bullfinch (*Pyrrhula europæa*) has an evil reputation as a destroyer of buds of fruit trees, and Professor Collinge confirms this opinion by the results of examination of the stomachs of 308 of these birds. He finds that "during the five months, January to May, the food consists largely of fruit-buds
